GHERKIN
(Advanced Cucumber)

Feature - Description of the feature file (Doesn't affect the behaviour of the Cucumber tests)

Background - Defines common steps across multiple scenarios

Scenario - A feature file can have multiple scenarios; each test is described by the scenario keyword

Given - Preconditions of a scenario

When - Description of the action which will be executed

Then - Specific outcome from executing the last step

And - Provides an additional condition to the step

But - Negative conditions from the last executed step - (Asterisk) To some its easier to read, can be used instead of Given, When, Then...

Scenario Outline - Enables data to be sent to scenarios using template(s) and examples (Stops code duplication)

Examples - Used alongside Scenario Outlines, used to provide real life examples for a specific scenario outline
